Known Issues

- In the profile pages, certain navigational button won't pass the correct information and will therefore show a users page with incorrect information, such as who is on their friends list.
- For one of our members, going on to the map screen crashes the app, however we do not know what causes this bug, nor how to reproduce it.
- When editing your profile, if you select a different image to be your profile picture, but then cancel the edits, the picture you chose will still show up as your picture for all previously made events.
- You can register an account without confirming password or giving a username
- The register page will return you to the login page without registering an account if the fields are not set.
- When you click on yourself in a list to view your profile it will give you the option to add yourself as a friend and you will appear on your own friend list
- Add friend option still appears in your friends profiles clicking it will just keep them as your
- Bio text does not wrap, so if bio is too long it can not be read.
- The slider bar can be unresponsive on the first click.
- Events can be created without putting in any information.
- No options for deleting or editing events you made
